

Lab-017

Snapshot an EBS Volume

Goal

This lab's goal is similar to lab-16 but because we want to move a volume from one AZ to another we will have to first create a snapshot of the volume and then create a new volume from the snapshot.

Architecture Diagram

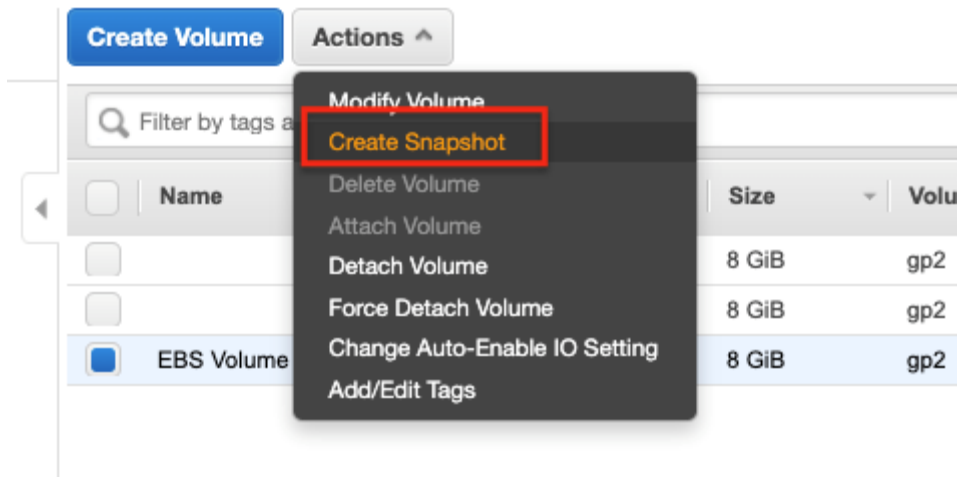

Overview

Create two EC2 instances in different AZs. Create an EBS volume and attach it to one of them. Create some files in the volume and then terminate the the EC2 that had the attached volume. Then follow the steps.

Step 1 - Create an Snapshot of an EBS Volume

Go to *Elastic Block Store - Snapshots*.

Volumes > Create Snapshot

Create Snapshot

Volume vol-068d61b2538c69329 ⓘ

Description ⓘ

Encrypted Not Encrypted ⓘ

Key (128 characters maximum) Value (256 characters maximum)

This resource currently has no tags

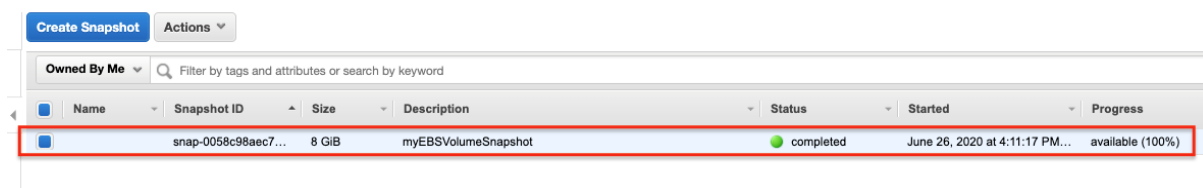

Choose the Add tag button or [click to add a Name tag](#)

Add Tag 50 remaining (Up to 50 tags maximum)

* Required

Cancel

Verify that your snapshot was successfully created at *Snapshots*. You might want to copy the *Snapshot ID* to use it on the next step. Once your snapshot is created you can delete the EBS volume.

Step 2 - Create an EBS Volume from a Snapshot

Create a new volume from the snapshot that you created in the previous step. Make sure your volume is created on the other AZ.

Create Volume

Volume Type

General Purpose SSD (gp2) ⓘ

Size (GiB)

8

(Min: 1 GiB, Max: 16384 GiB) ⓘ

IOPS

100 / 3000

(Baseline of 3 IOPS per GiB with a minimum of 100 IOPS, burstable to 3000 IOPS) ⓘ

Availability Zone*

us-west-1c ⓘ

Throughput (MB/s)

Not applicable ⓘ

Snapshot ID

snap-0058c98aec7e9c213 ⓘ

Fast Snapshot Restore

Not enabled ⓘ

Encryption

☐ Encrypt this volume

Key (128 characters maximum)

Value (256 characters maximum)

This resource currently has no tags

Choose the Add tag button or [click to add a Name tag](#)

Add Tag

50 remaining (Up to 50 tags maximum)

* Required

[Cancel](#) [Create Volume](#)

Step 3 - Attach EBS Volume

Attach the EBS volume created from the snapshot to the EC2 instance running on the other AZ.

Test and Validation

Connect to the EC2 instance running on the other AZ, mount the EBS volume and see if you can access the files created earlier.

Challenge

Try encrypting the EBS volume that you will be creating from the snapshot. Use the following steps:

- create a snapshot from the EBS volume,
- copy the (unencrypted) snapshot to a new (now encrypted) snapshot, and
- create an EBS volume from the encrypted snapshot.
